Save/edit user gamer tags	Britania	yes
Finished backend endpoints for database	Jason	Yes
Implementing find and view connections pages	Jason	No

Before The Next Meeting

Plans:

- Ensure that all front end and back end components are fully developed
- Start connecting the front and back end together

Task Assignments:

Task Description	Assigned to
Finish stats page for Apex Legends	Ryan Lin
Make Apex Legends UI look good	Ryan Lin
Accessibility features	Britania
Finish Login/sign up integration with backend	Britania
Finish find and view connections implementations	Jason
Make League Stats page look good	Jason

Minutes from Previous Meeting

- Britania has integration the backend with the front for the profile page.
- The user can now update the users profile information and gamers tags at the push of a button
- Britania has started the integration of adding a discord name to the user profile and a delete account button
- Jason has been working on updating the league statistics front, integration back end for view connections and find connections page
- Ryan implemented a filtering system for the view connections and find connections page
- As a team we decided to change our last game but using the same API because the last game was causing problems with making requests. We are now using Apex legends.
- Ryan has started the apex legends stats page by adding the API requests to tracker.gg
